

Software Requirements Specification (SRS)

Ticket Booking System

1. Introduction

This document outlines the requirements for a web-based Ticket Booking System. The system allows users to view schedules, reserve seats, and purchase tickets online.

2. General Description

The system serves two main user types: customers and administrators. It operates in real-time to prevent double-booking of seats.

3. Functional Requirements

3.1 Customer Features

- **User Registration:** Create a personal account.
- **User Login:** Access the system securely.
- **Search Events:** Filter by date, location, or type.
- **Seat Selection:** View a live map and select seats.
- **Online Payment:** Pay via credit card or digital wallet.
- **Ticket Generation:** Receive a digital ticket with a unique QR code.
- **Booking History:** View past and upcoming reservations.

3.2 Administrator Features

- **Manage Events:** Add, edit, or cancel events and schedules.
- **Inventory Control:** Set ticket prices and seat capacities.
- **View Reports:** Export sales data and attendance analytics.

4. Non-Functional Requirements

- **Security:** Encrypt all user passwords and payment transactions (SSL/TLS).
- **Availability:** Ensure the system is online 99.9% of the time.
- **Performance:** Process booking confirmations in under 2 seconds.
- **Scalability:** Handle up to 10,000 concurrent users during peak sales.
